MT795 Web Platform

https://qrco.de/MT795_Web_Software

Click the web link to access advanced power quality analysis anytime, anywhere with the MT795 Web Platform.

Users can log in securely through any PC browser to remotely view data uploaded from the MT795 via a cloud server. Because the platform connects through the cloud rather than directly to the meter, there is a slight delay of about one minute in data updates. This setup allows you to monitor your power systems without needing to be physically near the device.

The platform offers powerful data visualisation tools and comprehensive power quality analysis, helping you evaluate whether your electrical system meets industry standards. Whether conducting detailed diagnostics or reviewing historical data, the MT795 Web Platform delivers an efficient and flexible solution for modern power management.
